

Thinking about the future of child

It is important for every parent that their child enters a higher educational institution and is one of the smartest and most talented in the area in which he is interested. Each parent must create the necessary conditions for their child to follow the right path and do what they love, what interests him, namely computer technology and cadastre. Valijon Shamshiev, Honored Artist of Uzbekistan, and his son Shamsiddin visited the Consultation Center organized at our institute for applicants for the 2020-2021 academic year. During the conversation, an employee of the Call center Melikuziev D., as well as employees of the Consulting Center Allayorov D. and Shermukhammedov H. identified Shamsiddin's interests, aspirations and spoke in detail about the educational directions and conditions created for students at the institute.
